# High-performance, Next-generation Antivirus + Antispyware for the Enterprise

KEY SELLING POINTS

## Better performance over older antivirus solutions

VIPRE Enterprise addresses the pent-up frustration of system administrators over the problems of existing endpoint security solutions, such as bloat, high resource usage, and difficult or poor agent management and deployment.

Other antivirus companies take old and outdated antivirus products, bolt on module after module creating bloatware and peddle these products as a new security solution to their clients. These old style antivirus products hog system resources, slows users' computers causing headaches for system administrators.

The combination of the all-new VIPRE endpoint agent, with Sunbelt's field-tested management console provides administrators with a robust, stable, and simple-to-use platform to provide comprehensive and powerful endpoint protection for all of their managed desktops.

## High-performance threat protection with low impact on system resources

VIPRE Enterprise was designed to optimize overall performance by melding antivirus and antispyware together into one, single, powerful engine. This combination of technologies gives you high-performance software that doesn't slow down users' PCs, is low on system resources, and makes it easy for you to protect your network.

## Ease of management and deployment

With VIPRE Enterprise, administrators can easily create a customized "malware command center" that gives instant access to your most used reports and policy controls. The management console provides four customizable dashboards for at-a-glance views of scanning and remediation activities that show overall network health and performance.

Enabled at the policy level, automatic deployment of agents to the network allows administrators to specify any combination of machine lists, IP addresses, IP ranges, IP subnets, and Active Directory Organizational Units (OUs) to be resolved and deployed to without admin interaction. The traditional methods of deployment such as console push and MSI packages are also included.

## Responsive top-of-the-line 24/7 US-based technical support

We realize customers have a choice in providers. Here at Sunbelt we have a dedicated team of US-based Support Engineers ready and available to assist any technical problems customers may have. And not just via email! With different support options available, we pride ourselves on delivering prompt response time and support.

Q&A

### **"Why should I buy this instead of Symantec's new end-point security?"**

*"Symantec has improved their malware detection, however, it is complicated to install and manage and there is a LOT of code running in the background. This can noticeably slow down a workstation."*

### **"Are there different levels of tech support – silver, gold, etc.?"**

*"There is only one level - all customers, large and small, are given the highest quality tech support!"*

### **"How much will it cost to renew my software license?"**

*"30% of the retail cost of the license per year. This is one of the lowest renewal rates in the industry. This gives you upgrade protection, full, unlimited tech support and subscription to threat definitions."*

TOP FEATURES

<p><b>1 Proprietary antivirus and antispyware detection engine uses all-new technology</b></p>	<p>At VIPRE Enterprise's core is an antivirus and antispyware agent that merges the detection of all types of malware into a single, efficient, and powerful system. The new technology was developed exclusively by Sunbelt, without building on older generation antivirus engines.</p> <p>VIPRE Enterprise uses multiple techniques to inspect the characteristics of all types of potentially threatening files. From simple signature-based detection to dynamic, sophisticated analysis of malware files, VIPRE quickly determines whether a file is good or bad — enabling comprehensive detection of both existing and new unidentified threats.</p>
<p><b>2 Checkmark Anti-Virus Certified</b></p>	<p>VIPRE is Checkmark Anti-Virus Desktop certified by West Coast Labs and will receive additional certifications through other certifying bodies in the coming months.</p>
<p><b>3 FirstScan</b></p>	<p>VIPRE Enterprise features FirstScan™, a scan and remove on-boot technology designed specifically to detect and remove the most deeply embedded malware.</p>
<p><b>4 Kernel-level Active Protection</b></p>	<p>VIPRE Enterprise's Active Protection offers signature, behavioral and heuristic-based real-time blocking of threats. It works seamlessly with existing desktop antivirus solutions.</p>
<p><b>5 Customized 'Malware Command Center'</b></p>	<p>Company-wide malware management requires a real enterprise product with centralized management. VIPRE Enterprise is just that: a scalable, policy-based, anti-malware tool built from the ground up by and for system- and network administrators to kill malware quickly and easily.</p>
<p><b>6 VIPRE Enterprise supports the latest Microsoft® Windows platforms</b></p>	<p>VIPRE Enterprise supports the latest Windows operating systems for the agent, console, and servers, making it easy to implement into your current environment while ensuring that your user machines are protected from the latest threats. Some vendors do not support several Windows operating systems for the console and server components.</p>

TECH SPECS

**Administration Console and VIPRE Enterprise Services**

**Operating System**

- Windows Server 2008
- Windows Vista (32 and 64 bit)
- Windows Server 2003
- Windows XP Professional
- Windows 2000 Server with SP4 or later
- Windows 2000 Professional with SP4 or later

**Hardware**

- Pentium III 400 MHz or higher
- 300 MB free disk space
- 512 MB memory
- 1024 x 768 monitor resolution

**Miscellaneous**

- MDAC 2.6 SP2 or later
- Internet Explorer 6 or later
- Microsoft .NET Framework 2.0

**VIPRE Enterprise Agent**

**Operating System**

- Windows Server 2008
- Windows Vista, SP1 (32 and 64 bit)
- Windows Server 2003, R2, SP1, SP2 (32 and 64 bit)
- Windows XP Pro SP1, SP2, SP3 (32 and 64 bit)
- Windows XP Home SP1, SP2, SP3 (32 and 64 bit)
- Windows 2000 Server with SP4 RU1 or later
- Windows 2000 Professional with SP4 RU1 or later

**Hardware**

- 150 MB free disk space
- 256 MB memory

**Email Support Requirements**

- Vista Windows Mail
- Outlook 2000+
- Outlook Express 5.0+
- SMTP and POP3

**Miscellaneous**

- Internet Explorer 6 or later
